

Web Biotechnology Pte Ltd announces Pre-Series A convertible Loan funding from SGinnovate

SINGAPORE, Jan. 3, 2018 /PRNewswire/ -- Web Biotechnology Pte Ltd (WEB, the "Company"), specializing in Cloud-based Remote and Personalized Wearable ECG monitoring today announced a Pre-series A financing round from Singapore-based SGinnovate.

Cloud-based Wireless ECG Monitoring System - Spyder

WEB produces the **Spyder ECG**, the World's first medical grade ECG wearable that transmits continuously through a smartphone to a Cloud Database. Artificial Intelligence (AI) is then applied to the data to analyze ECG rhythm abnormalities in real-time. Its unique 24/7 "always on" system allows continuous patient ECG data transmission from anywhere in the world with a connected smartphone. Physicians can remotely log in securely into the database and report findings to patients from another connected device.

WEB has 2 product lines; the **Spyder PRO**, which is used to replace traditional hospital-based Holter ECG systems with a simple non-invasive wearable system for diagnostic ECG monitoring for extended periods up to a month. The PRO is widely available in many hospitals in Singapore, in Asia and the EU, is CE-Marked and HSA (Health Sciences Authority Singapore)-approved for remote cardiac rhythm monitoring. Its ease of use by patients, real-time wireless connectivity to the cloud, allowing quick physician feedback has proven a marked improvement over traditional cumbersome, wired Holter systems. The Spyder PRO is available currently in over 30 countries worldwide through WEB's distribution network.

The **Spyder PERSONAL** is an ECG Event monitor that allows anyone with a Spyder Wearable and connected smartphone to monitor his or her own cardiac rhythm. An App-enable smartphone allows continuous personal visualization of the ECG and an intuitive interface on the smartphone allows a 5-minute rhythm strip/event to be captured with this system into the cloud database. The user receives the captured event via immediate Email notification and the ECG strip can be sent to a physician for consultation. The Spyder PERSONAL is available as an online purchase.

Simplify Life...

SGInnovate's priority is to work with deeply-technical founders that have research-originated IP at the core of their companies. Its mission is to enable ambitious and capable individuals and teams to imagine, start, build and scale globally-relevant technologies. It backs the entrepreneurs through equity investments, access to talent, and support in building customer traction. SGInnovate is a private limited company wholly owned by the Singapore Government.

Funds raised will be used by WEB to expand and scale into new markets, improve core backend Cloud database and AI systems, and research new generation improved ECG and vital sign wearables.

Web Biotechnology通过 Pre-A轮融资获得SGinnovate的投资

SGinnovate 的投资为可转换贷款投资

新加坡 2018 年 1 月 3 日电 /美通社/ -- 专注于基于云的远程和个性化可穿戴式心电图 (ECG) 监测的 Web Biotechnology Pte Ltd (简称“WEB”或“该公司”) 今天宣布通过 Pre-A 轮融资获得 SGinnovate (新加坡创新机构) 的投资。

Cloud-based Wireless ECG Monitoring System - Spyder

WEB 生产了全球首款通过智能手机持续向云数据库传输数据的医疗级心电图可穿戴设备 **Spyder ECG**。这些数据随后可利用人工智能 (AI) 实时分析心电图异常心律。该设备的全天候“随时在线”系统使患者可通过联网智能手机，在世界任何地方持续传输心电图数据。医生可使用另一台联网设备远程安全登录数据库，并向患者反馈结果。

WEB 拥有两大产品线：**Spyder PRO** 使用简单的非侵入性可穿戴系统（用于诊断性心电图监测，延长期长达一个月）替代传统的医院动态心电图系统。**PRO** 在新加坡、亚洲和欧盟的众多医院广泛销售，拥有 CE 认证标志，并获得新加坡卫生科学局 (Health Sciences Authority Singapore) 批准，用于远程心律监测。该设备为患者带来的易用性、与云端的实时无线连接以及快速的医生反馈证明其较难以携带的传统有线 **Holter** 系统有显著改进。**Spyder PRO** 目前通过 WEB 的分销网络在全球 30 多个国家销售。

Spyder PERSONAL 是一种心电图监测器，帮助所有拥有 Spyder 可穿戴式设备和智能手机的人监测自己的心律。支持应用的智能手机使个人可持续监测心电图；智能手机的直观界面使通过该系统捕捉的 5 分钟心律图可传输到云数据库。用户可通过即时电子邮件通知收到捕捉的心律图，心电图可发送给医生进行会诊。Spyder PERSONAL 可在线购买。

SGinnovate 的重中之重是与拥有强大技术的创始人合作，这些创始人的公司的核心是拥有研究型 IP。该机构的使命是帮助拥有雄心壮志与能力的个人和团队设想、开始、创建和升级在全球范围内都很重要的技术。SGinnovate 通过股权投资、获得人才以及吸引客户支持为企业家提供支持。SGinnovate 是一家未上市有限公司，由新加坡政府全资拥有。

WEB 将把筹款用于拓展和进军新市场；改善核心后台云数据库和人工智能系统以及研究新一代改善型心电图和生命体征可穿戴设备。
